

# Autocorrect

Has anyone else noticed that Apple' s iOS keyboard/autocorrect recommendations in the latest iOS no longer autocorrect the word fascism? They' ve literally given it the same treatment as low level swears. Fascinating what this very small move signals about corporate views of fascism in the US. We' re living it —and we' re moving towards not being allowed to talk about it. Too few own the means of knowledge sharing and critique. Meta and Twitter are not public goods.
