I'm trying something a little different on the web view of **mind reader**. I've introduced (manual) ML based AI summaries for some articles shared. This way you're saved from engaging with full text if you have limited time, but can otherwise choose to ignore "AI" and carry on with your day. For logged in people (hello, yes, sign up if you haven't) I've added a switch to enable/disable these summaries. Just to be clear, these summaries are generated by Kagi's Universal Summarizer product, they're generated on the server side and you are never exposed to any "AI" mumbo jumbo on the client side—rest assured there's no gross tracking, AI slop, or other nastiness here. Also this post type is new, so you're on the bleeding edge!
